

# Cross Stack Reference

- We then create a second template that leverages that security group
- For this, we use the **`Fn::ImportValue`** function
- You can't delete the underlying stack until all the references are deleted too.

```
Resources:
  MySecureInstance:
    Type: AWS::EC2::Instance
    Properties:
      AvailabilityZone: us-east-1a
      ImageId: ami-a4c7edb2
      InstanceType: t2.micro
      SecurityGroups:
        - !ImportValue SSHSecurityGroup
```
