

Queues & Lambda

- Lambda also supports in-order processing for FIFO (first-in, first-out) queues, **scaling up to the number of active message groups**.
- For standard queues, items aren't necessarily processed in order.
- Lambda scales up to process a standard queue as quickly as possible.
- When an error occurs, batches are returned to the queue as individual items and might be processed in a different grouping than the original batch.
- Occasionally, the event source mapping might receive the same item from the queue twice, even if no function error occurred.
- Lambda deletes items from the queue after they're processed successfully.
- You can configure the source queue to send items to a dead-letter queue if they can't be processed.
