

Ordering data into Kinesis

- Imagine you have 100 trucks (truck_1, truck_2, ... truck_100) on the road sending their GPS positions regularly into AWS.
- You want to consume the data in order for each truck, so that you can track their movement accurately.
- How should you send that data into Kinesis?
- Answer: send using a “Partition Key” value of the “truck_id”
- The same key will always go to the same shard
