

# X-Ray with Elastic Beanstalk

- AWS Elastic Beanstalk platforms include the X-Ray daemon
- You can run the daemon by setting an option in the Elastic Beanstalk console or with a configuration file (in `.ebextensions/xray-daemon.config`)

```
option_settings:  
  aws:elasticbeanstalk:xray:  
    XRayEnabled: true
```

- Make sure to give your instance profile the correct IAM permissions so that the X-Ray daemon can function correctly
- Then make sure your application code is instrumented with the X-Ray SDK
- Note: The X-Ray daemon is not provided for Multicontainer Docker
