

# How to Reference a Parameter

- The `Fn::Ref` function can be leveraged to reference parameters
- Parameters can be used anywhere in a template.
- The shorthand for this in YAML is `!Ref`
- The function can also reference other elements within the template

```
DbSubnet1:  
  Type: AWS::EC2::Subnet  
  Properties:  
    VpcId: !Ref MyVPC
```
