

Fn::Ref

- The `Fn::Ref` function can be leveraged to reference
 - Parameters => returns the value of the parameter
 - Resources => returns the physical ID of the underlying resource (ex: EC2 ID)
- The shorthand for this in YAML is `!Ref`

```
DbSubnet1:  
  Type: AWS::EC2::Subnet  
  Properties:  
    VpcId: !Ref MyVPC
```
