

# Introductory Example

- We're going to create a simple EC2 instance.
  - Then we're going to create to add an Elastic IP to it
  - And we're going to add two security groups to it
  - For now, forget about the code syntax.
  - We'll look at the structure of the files later on
- 
- We'll see how in no-time, we are able to get started with CloudFormation!

**EC2 Instance**
